

Mysql Command of the day

May 3, 2007 / Gavin Jackson

I thought this one was worth blogging. To save the output of an SQL query in a file simply do this:

```
SELECT *  
FROM table  
INTO OUTFILE "/tmp/filename.txt"
```

Produces a tab delimited file with the outputs of the query - pretty simple...

```
SELECT order_id,product_name,qty  
FROM orders  
INTO OUTFILE '/tmp/orders.csv'  
FIELDS TERMINATED BY ','  
ENCLOSED BY ''''  
LINES TERMINATED BY '\n'
```

Will enclose the fields in quotes separated with a comma.
